APPLICATION FOR PERMIT UNDER POLLUTION CONTROL ACT, 1967 (Effluent)

Preamble—Explanation for application to Pollution Control Board for a permit to discharge primarily treated sewage to the Strait of Juan de Fuca from Esquimalt Lagoon Subdivision.

Existing situation: The existing 70-Lot subdivision currently disposes of domestic sewage in individual septic-tank systems or via chromoglass units discharging to ground disposal facilities.

Many of the ground disposal systems have failed, resulting in pollution of the ground water with sewage. The surfacing of polluted water results in a potential health hazard of some considerable magnitude.

The polluted surface and ground waters drain into Esquimalt Lagoon and this gives rise to a deterioration of the environmental and aesthetic qualities of the lagoon.

Methods of treatment and disposal considered: Subsurface disposal of the sewage is not practical in the majority of the area because of the high water-table as evidenced by existing failures.

Surface disposal by spray irrigation in winter is not practical because of slope, runoff, and a high water-table in the area.

Secondary treatment is prohibitively expensive and cannot be financed by the 70 home-owners in this subdivision.

Proposed interim solution: The solution which is proposed is designed to alleviate existing health and pollution problems in the lagoon area.

A collection system of closed sewers is proposed and this arrangement will separate the sewage from the ground water, thus eliminating the existing health hazard and preventing further deteriorating of the waters in the lagoon.

The collected sewage will be treated by screening, which will greatly reduce the pollution load of the sewage and render the effluent of far better quality than raw sewage.

The treated effluent will be disposed of through an outfall terminating 1,200 feet offshore, as measured from outside the lagoon. The ocean will dilute the treated sewage and complete the natural treatment process.

The ocean disposal arrangement will be discontinued when the regional trunk system is installed in the western community.

The costs of the proposed works will be borne by the home-owners of the 70 existing homes and no further development will be permitted until the regional sewer system is completed.

THIS APPLICATION is to be filed with the Director, Pollution Control Branch, Parliament Buildings, Victoria, B.C. Any person who qualifies as an objector under section 13 (2) of the *Pollution Control Act, 1967* may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or, where service is required,

within 30 days of the serving of a copy of the application, file with the Director an objection in writing to the granting of a permit, stating the manner in which he is affected. Those who do not so qualify may file with the Pollution Control Board an objection in writing under section 13 (6), in the same manner and time period as described above.

Capital Regional District, of 524 Yates Street (Drawer 1000), Victoria, B.C. V8W 2S6, hereby applies to the Director for a permit to discharge effluent from a 70-household existing subdivision located neighbouring Portsmouth Drive, Colwood, into the Strait of Juan de Fuca which discharges into the Pacific Ocean, and gives notice of application to all persons affected.

The land upon which the works are located is Land Registry Office Plans 25862, 24813, and 24250, Sections 14 and 35, Esquimalt District.

The discharge shall be located at a point approximately 2,450 feet N.52°20'E. of the intersection of Lagoon Road and Coburg Peninsula (1,200 feet offshore from low-water mark).

The quantity of effluent to be discharged is as follows: Average annual daily discharge (based on operating period), 21,500 imperial gallons. Maximum daily discharge, 21,500 imperial gallons.

The operating period during which the effluent will be discharged is continuous.

The characteristics of the effluent discharged shall be equivalent to or better than typical septic-tank effluent.

The type of treatment to be applied to the effluent before discharge is primary screening of all sewage.

I, N. Howard, Chief Engineer, hereby certify that a copy of this application has been received by the Capital Regional District.

This application, dated on the 20th day of December 1976, was posted on the ground in accordance with the Pollution Control Regulations.
